A Fresh Breath of Tradition

Stephenson Cupolas
and Weather Vanes
For more than 40 years, handcrafted Stephenson Cupolas have provided a fresh breath of tradition to country homes, carriage houses, barns, and public buildings. They add a charming architectural accent while substantially improving ventilation. The preassembled wood bases feature simple, clean lines and large, flow-through louver panels.

The shapely copper and aluminum roofs are distinctive and long-lasting. Topped with one of our handsome weathervanes, Stephenson Cupolas are a graceful reminder of our proud American heritage. They delight the eye and add lasting value to the property.

Height: 24"*
**Described to Protect You from Costly Attic Moisture Problems ... Naturally.**

Ventilate warm moist air up and out of the attic through the generous louver panels and stop worrying about wood rot, mildew, peeling paint, and musty odors. Stephenson Cupolas even help prevent ice dams in rain gutters by evacuating under-roof moisture. Install and forget—no ventilator fans to wear out, no electrical wiring to install and maintain.

---

**Installation is easy**

Before installing the cupola, protect interior and exterior wood surfaces with an oil-base sealer and topcoat.

1. **Saw out the roof opening for the cupola,** being careful not to cut rafters or the roof ridge. Screening can be stapled over the opening to keep out insects.

2. **Lay two pieces of scrap wood at the roof’s peak and mark them where they cross.** Use the marked pieces as a template for notching the cupola base so that it fits the roof.

3. **Secure the base to the roof with non-ferrous nails driven at an angle.**

4. **Secure the cupola roof.**

5. **Attach weathervane. Paint or stain the cupola.**
